PROFESSIONAL SUMMARY

Methodical and hands-on IT technician with a strong foundation in systems administration, network configuration, and OS infrastructure. Experienced in hardening Linux environments, configuring firewall rules, managing secure remote access, and leveraging Python scripts and modern CLI productivity tools (such as Claude Code and Gemini CLI) for operational efficiency. Rigorous troubleshooter with a service-oriented mindset and a proactive approach to incident resolution.

TECHNICAL SKILLS & COMPETENCIES

Systems Administration	Linux (Debian, CentOS), Virtualisation (VirtualBox, QEMU), User & Group Management, SUDO/PAM Policies.
Networking & Security	TCP/IP, Routing, Firewall Configuration (UFW), SSH Hardening, Network Diagnostics, Static/Dynamic IP setup.
Scripting & Automation	Python, Bash Scripting, CLI Tooling (Claude Code, Gemini CLI), System Monitoring Automation.
Support & Troubleshooting	Hardware/Software Incident Diagnosis, System Hardening, Log Analysis, Technical Documentation.

TECHNICAL PROJECTS

Born 2 be root

System Administration & Security Hardening

- Configured and deployed a secure, headless Linux server (Debian) on a virtual machine following strict security guidelines.
- Implemented LVM (Logical Volume Manager) encrypted disk partitioning to ensure data structure integrity and security.
- Enforced strict password age and complexity rules via PAM, managed user privileges, and set up custom administrative sudo policies.
- Configured network security through SSH hardening (custom port, root login prohibition) and UFW firewall rule setup.
- Wrote automated Bash monitoring scripts running via cron jobs to output live system status, memory usage, and connection alerts.

Python Automation & Terminal Workflows

Scripting & AI CLI Integration

- Developed modular Python utilities to process structural data and automate repetitive administrative tasks.
- Integrated modern CLI AI assistants (Claude Code, Gemini CLI) into terminal workflows to accelerate log parsing, script debugging, and system diagnostic routines.

EDUCATION & TRAINING

42 Porto

Present

Computer Science & Software Engineering Program

- Hands-on curriculum focusing on low-level programming, UNIX system operations, network fundamentals, and rigorous peer code evaluations.
