Miguel de Freitas Pacheco Vaz André

IT SYSTEMS & NETWORK TECHNICIAN

📍 Porto Metropolitan Area, Portugal ✉️ miguelpacheco.vazandre@gmail.com

🔗linkedin.com/in/miguel-de-freitas-pacheco-vaz-andré

PROFESSIONAL SUMMARY

Methodical IT professional and Systems Technician with a solid background combining technical leadership (former CTO at Beyond Banking Portugal), practical systems engineering, and low-level system architecture. Experienced in managing Linux systems (Debian, Pure Arch Linux), hardening server security, configuring virtualized environments, and automating administrative tasks with Python, Bash, and modern CLI tools (Claude Code, Gemini CLI). Strong analytical mindset grounded in physical sciences and technical education, with a proven service-oriented approach to network and infrastructure maintenance.

TECHNICAL SKILLS & COMPETENCIES

Systems & OS	Linux Administration (Debian, Pure Arch Linux), Virtualisation (VirtualBox, QEMU/KVM), User/Group Governance, PAM & SUDO Hardening.
Networking & Security	TCP/IP, Routing & Subnetting, UFW Firewall Management, SSH Hardening, Network Incident Diagnosis, Port Configuration.
Automation & Scripting	C, Python, Bash Scripting, Cron Automation, Modern CLI Workflows (Claude Code, Gemini CLI).
Technical Leadership	System Architecture, Technical Strategy, Vendor & Incident Management, Comprehensive System Documentation.

PROFESSIONAL EXPERIENCE

Beyond Banking Portugal — **Chief Technology Officer (CTO)**

- Led technical strategy, infrastructure decisions, and technology architecture for organization initiatives.
- Oversee infrastructure reliability, access management, and internal IT policies.
- Collaborated with non-technical stakeholders to translate technical requirements into operational infrastructure.

TECHNICAL PROJECTS

Born 2 be root — **System Administration & Security Hardening (42 Project)**

- Built and deployed a secure, headless Debian Linux server from scratch inside a virtualized environment.
- Configured LVM partition scheme, strict password rules (PAM), custom sudoers policies, and UFW firewall boundaries.
- Hardened SSH protocols (non-standard port, root login ban) and created Bash monitoring scripts automated via cron.

Python Automation & Terminal Workflows — **Scripting & Infrastructure Utility**

- Authored robust Python utilities for data processing and system maintenance within a Pure Arch Linux environment.
- Streamlined diagnostic and log evaluation tasks by integrating terminal-native AI tools (Claude Code, Gemini CLI).

EDUCATION & TRAINING

42 Porto — Present

Software Engineering & Computer Science Program

- Official Student Ambassador. Currently transitioning from Milestone 3 to Milestone 4.
- Hands-on peer-to-peer curriculum covering low-level system administration, C/C++, Linux environments, and algorithms.

IPMAIA — Instituto Politécnico da Maia

Licenciatura em Tecnologias de Informação, Web e Multimédia (Completed 1 Year)

Foundational coursework in web technologies, information systems, and core computer science concepts.

Universidade de Aveiro

Mestrado Integrado em Engenharia Física (Completed 2 Years)

Advanced studies in applied physics, mathematical modelling, analytical problem solving, and instrumentation fundamentals.
